

## PRACTICAL PEARL: Constipation

<b>INTRODUCTION</b>	<ul style="list-style-type: none"><li>• Constipation is a common childhood symptom, accounting for up to 20% of primary care visits; 40% of cases may be chronic, typically beginning in the first three years of life.</li><li>• In most children, no underlying abnormality can be identified.</li><li>• The ROME III criteria define functional constipation as &lt; 2 BM's per week associated with pain, large, obstructive BM's, and fecal mass in the rectum.</li><li>• Alarm signs that may suggest an underlying abnormality are: Delayed passage of meconium&gt;48 hrs, FTT, recurrent UTI, persistent blood in stools, persistent abdominal distension and/or persistent vomiting</li><li>• Functional constipation is managed by parental education, emphasis on fluid and diet, and use of stool softeners (polyethylene glycol, lactulose) with or without laxative agents.</li><li>• <a href="http://pedsinreview.aappublications.org/content/36/9/392">http://pedsinreview.aappublications.org/content/36/9/392</a></li></ul>
<b>INITIAL EVALUATION AND MANAGEMENT BY PRIMARY CARE</b>	<ul style="list-style-type: none"><li>• History: Elicit any alarm signs, determine any family history of CF, celiac disease, atopia</li><li>• Exam: Growth parameters, abdominal exam, anal exam for anterior anus, tags, fissures; sacral exam for dimples, tufts, sinus, gluteal fold symmetry; rectal exam for stenosis, empty vault, mass, gross blood</li><li>• In most cases no lab or X-ray testing needed</li></ul>
<b>WHEN TO REFER</b>	<ul style="list-style-type: none"><li>• Presence of alarm signs, abnormal PE and recalcitrant constipation</li></ul>
<b>HOW TO REFER</b>	<ul style="list-style-type: none"><li>• (413) 794-KIDS</li></ul>
<b>WHAT TO EXPECT FROM BAYSTATE CHILDREN'S HOSPITAL VISIT</b>	<ul style="list-style-type: none"><li>• Detailed assessment, parental education and dietary guidelines</li><li>• Potential evaluation to include laboratory, radiographic, endoscopic, biopsy, manometry</li></ul>
